

Operators: precedence

Precedence and associativity: rules for evaluating expressions when brackets are not given

Examples:

10 - 4 - 3

10 - (4 - 3)

2 ** 2 ** 3

Precedence table (incomplete, descending order)

**	exponentiation
+x -x	positive, negative
* / // %	
+ -	
< <= > >= != ==	
not x	Logical/Boolean NOT
